Application/Control Number: 10/530,532

Art Unit: 1712

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2,4-9,11,13 and 14 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Ajiro EP967244.

Ajiro claims (#1) blends of rubber, novolak resin and hexamethylenetetramine.

The novolak (paragraph 42) can be one of applicant's preferred novolaks.

Claims 1-15 rejected under 35 U.S.C. 103(a) as being unpatentable over Ajiro EP967244 in view of Numata '982.

Ajiro suggests one applicant's preferred novolaks (R1=xylylene) but not applicant's other preferred novolak.

Numata suggests both of applicant's preferred novolaks when in his formula R= phenyl or diphenyl (col 2 line 25).

Since Numata teaches the equivalence of phenyl and diphenyl in the novolak backbone, it would have been prima facie obvious to employ a novolak with R1 = -CH2-Ph-CH2- (in accordance with applicant's structure).

Application/Control Number: 10/530,532

Art Unit: 1712

Claims 1,5 and 6 rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Vredenburgh '723.

Vredenburgh exemplifies (IV) a blend of rubber and a butylphenol-paraldehyde novolak. Such a novolak would have repeating units of only (A) with R2 = methyl (col 2 line 20-21). It is assumed the number of repeating units <10 because novolaks (ie phenolic resins) in general have a low number of repeating when added to rubbers (see EP967244 paragraph 34).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David Buttner whose telephone number is 571-272-1084. The examiner can normally be reached on weekdays from 10 to 5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Randy Gulakowski, can be reached on 571-272-1302. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
